Natural Foods Market

Fatigue often hinders our ability to enjoy life. Increasing our blood's ability to capture oxygen in our lungs and deliver it to our tissues can make a big difference in how we feel. Photosynthesis in green plants produces chlorophyll that activates the hemoglobin in our blood, which is responsible for supplying oxygen to each of our cells.

ChlorOxygen is a highly-potent concentrated form of chlorophyll necessary to produce more hemoglobin for restoring healthy red blood cells and their oxygen-carrying capacity. Improving oxygen levels in those who have respiratory challenges, may be recovering from surgery or simply want relief from fatigue, ChlorOxygen can also facilitate acclimation to higher altitudes.

When fatigued, it's easy to turn to sugar, caffeine or other stimulants, but they actually deplete our energy. For quick, more sustained energy, ChlorOxygen can be used in a convenient soft gel or mint-flavored liquid concentrate that requires only a few drops daily.

As always, we guarantee your satisfaction.
